

Colors & Stains

Color Hardener & Deck Coat Overlay

Acid Stains

Note: Chemical **Acid Stains** are a reactive process with minerals in existing concrete, therefore, colors will have a variegated and mottled appearance. Due to reactive nature, concrete density, moisture and application methods color variations can be expected. Blue and green shade stains are for interior use and can not be used in areas with excess water or with slag concrete mix designs. **Note:** **Deck Coat**, **Color Hardener** and **Release** colors on this chart are close approximations. Variations may occur due to differences in cement, water, temperature and application techniques. ***These colors available in Release Agent.**
